

LEAN... GREEN...

Using our proprietary Greenshield technology most NG Riviera stone is now leaner. We have taken over 10% of the weight out of each unit. This means less weight in transport, less structure for the building, but mostly a much easier, safer product for the masons on the job.

Co2 Reduction Chart

Our enhanced Greenshield process provides a real CO2 reduction of between 3 and 7 times that of conventional competition. No other technology comes close.

All of the above in an extremely durable product, that was freeze and thaw tested in a salt environment (not the typical freeze and thaw where no salt is present). Aesthetically unpleasing 'starter courses' are never needed with NG Stone products.

& BLACK

Our newest entrant to the quoin market - A True Black!
Everyone wants a good black. Now you have it!
